

If you think we sell high-quality hose, YOU'RE ONLY 1/3 RIGHT.

When it comes to the Rein Automotive brand, the first thing most people think of is OE-quality cooling system components. And while CRP Automotive offers more than 700 Rein hose and cooling category SKUs for a wide range of late-model import vehicles, the Rein name also covers 2,500+ OE-quality replacement parts — including anti-vibration and power steering parts.

COOLING SYSTEM COMPONENTS

Covering 19 million+ vehicles in operation, Rein is a leader in the aftermarket cooling category.

COOLANT HOSES

Designed to be direct replacements for OE hoses and hose assemblies — with the correct number, size, and configuration of branches; plus thermoplastic “Quick Connect” fittings if required. Some kits include a pre-installed OE temperature sensor.

THERMOSTATS & ASSEMBLIES

A failed thermostat can negatively affect vehicle operation in several different ways. Rein thermostats match the temperature rating of the OE part to keep a vehicle running at peak performance. When replacing a water pump, it's a good idea to replace the thermostat at the same time.

WATER PUMPS & KITS

New water pumps sourced from industry-leading suppliers. Pump bearings match the OE design and materials for minimal thermal expansion and low noise. OE-quality gaskets come standard. Selected kits offer the option of a metal or plastic impeller, others include thermostat assembly and temperature sensor. All backed by an industry leading 4-year/50,000-mile warranty.

SENSORS

Sensors are a critical link in the proper operation of any engine. Rein offers a program of high-quality temperature and coolant level sensors. These sensors are easy to install, come with gaskets and retaining clips, and perform just like the OE part — and very often are the OE part!

COOLANT EXPANSION TANKS

A coolant expansion tank is exposed to thousands of heat cycles over the course of its service life — and that's not including any overheating conditions. Unlike similar tanks on the market, Rein Automotive expansion tanks are made from 100% virgin plastic to ensure longevity. Selected tank kits include tank, coolant level sensor, and cap.

CAPS

Caps may not seem like critical parts, but see what happens when one gets damaged or even lost. Many fuel caps have a valve that can fail — triggering a check engine light. Rein offers a program of OE-quality fuel, oil, and expansion tank caps — ensuring proper installation and function.

TO LEARN MORE, VISIT REINAUTOMOTIVE.COM

Hose is only part of what we sell. HERE ARE A FEW OTHER PARTS.

Whether it's a replacement engine mount or a power steering hose, Rein Automotive parts match the form and function of the original part. This gives you a true alternative to the dealer, allowing you to meet your margins without compromising quality.

ANTI-VIBRATION PARTS

In any vehicle, there are a number of systems and components that rely on anti-vibration parts to ensure acceptable NVH levels and safe operation. Rein Automotive offers an extensive range of anti-vibration parts — including hydraulic engine mounts.

ENGINE & TRANSMISSION MOUNTS

These critical parts don't just secure the engine and transmission to the vehicle — they also absorb vibration. Rein brand mounts are application-specific and match the design and function of the original parts to ensure the best possible performance.

DRIVE SHAFT MOUNTS

Holds drive shaft in place while allowing it to spin and flex. Normal wear and tear can cause the rubber part components to fail and lose their ability to absorb shocks and jolts. Bearings are also prone to failure. All Rein mounts include OE bearing when spec'd on original part.

STRUT MOUNTS & STRUT MOUNT KITS

A strut mount is an integral part of the strut assembly that helps reduce road and tire noise as well as vibration. When servicing the suspension system, replacing strut mounts along with other worn components ensures a smooth, quiet ride and extends the life of the system.

SWAY BAR & CONTROL ARM BUSHINGS

These bushings connect components in a suspension system while absorbing shocks and vibrations — contributing to a smooth and quiet ride. They are among the most common undercar parts needing maintenance/replacement due the constant movement and extreme forces involved.

BUMP STOPS

The last line of defense in the suspension system, bump stops play an important role in preventing damage to related suspension parts. They also prevent a suspension from bottoming-out in normal driving or when encountering hazards like potholes or speed bumps.

POWER STEERING COMPONENTS

Rein offers a robust program of power steering (P/S) hose assemblies and reservoirs for late-model Asian and European vehicles.

ASIAN POWER STEERING HOSES

First to market for a number of Honda, Hyundai, Kia, and Toyota models, Rein Automotive offers a power steering hose program covering 12,000,000 VIO (US and Canada). A Rein part will be more similar to the OE part than competitor hoses — with all the correct bends, banjo bolts, washers, pressure switch fittings (when specified by OE), and brackets.

POWER STEERING RESERVOIRS

As with coolant tanks, power steering fluid reservoirs are subjected to harsh underhood conditions. Additionally, many P/S reservoirs contain a built-in filter to collect contaminants. Over time, this filter can get clogged and should be replaced when needed — or any time the system has had a component failure of any kind. Like Rein Automotive expansion tanks, these reservoirs contain zero reground plastic.
