

We now offer **solutions** for problematic parts that need to be replaced more often.

- **Shaped Breather Hoses**
(Air, Breather, Vacuum)
- **Boot Kits**
(CV & Steering)
- **Caps**
(Coolant, Oil, Fuel)
- **Electrical Components**
(Relays, Sensors, Switches, Fans)
- **Engine Parts**
(Dipsticks & Dipstick Funnels)
- **Oil Hose Assemblies**
(P/S & Trans Oil Cooler Hoses)

REINFAB01

Some European parts are replaced so often that professional repair technicians need **First Aid.**

1

Introducing Rein First Aid.

Rein Automotive has identified particular parts with a higher than normal failure rate in European vehicles. By grouping these products together we now provide distributors with a competitive advantage so you can promptly address the common needs of professional repair technicians. This quick response program for commonly replaced parts is now known as **Rein First Aid**.

The goal of this program is to make things easier for both distributors and professional repair technicians. We do this by offering you a group of fast moving products most commonly purchased by professional repair technicians. Then make it even easier by including the smaller, often overlooked parts needed for installation. So, the switch you need also comes with the O-ring and retaining clip or the power steering hose comes with new washers and the hose clamp. We make sure **Rein First Aid** products are as easy for technicians to install as they are for our distributors to order, stock, and sell.

2

How can Rein First Aid help?

Many distributors offer major parts for European vehicles, but how about the odds and ends that will set you apart when professional repair technicians are in immediate need of a part? By having these items on hand and ready for shipment to professional repair technicians you can not only satisfy the needs of existing customers but also attract new customers who depend on the dealer for many of the components.

3

What types of products are offered?

Rein First Aid products are special because they come to the rescue when parts fail. When hoses leak, caps crack, or plastic breaks, it presents another opportunity for distributors to support their professional repair technician base with quick solutions to the more common problem parts on European vehicles.

Each of the different part types in the **Rein First Aid** offering was added for its own unique benefits. These are all failure prone items, but they fail or cause trouble in different ways.

Shaped Breather Hoses (Air/Breather/Vacuum)

These hoses play an important role in controlling fuel pressure as well as the flow of oxygen and other vapors throughout the engine. And in many European cars they can also be responsible for aggravating owners when their frequent cracks, leaks, and clogs cause the check engine light to illuminate.

With the Rein First Aid program you'll always have these and all the ancillary parts that go with them, in stock and ready to go.

Car models that are prone to have shaped breather hose problems:

BMW 3' Series 2001-05 • Mercedes-Benz ML320 1998-2003 • Mercedes-Benz C' Class 1994-2007

Boot Kits (CV and Steering)

Boot kits seal a joint in the car that would be destroyed by dirt, sand and other particles if left exposed, even under normal conditions. On many vehicles these boots last the lifetime of the vehicle, but the ones carried under the First Aid Program are known to have issues and split or crack much more frequently.

Car models that are prone to have boot kit problems:

BMW X5 2000-06 • Volkswagen Passat 1998-2005 • Mercedes-Benz E' Class 1998-2002

Coolant/Oil/Fuel Caps

Coolant, oil, and fuel caps help maintain correct pressure and a secure seal while allowing the access needed to add fluids to the vehicle. But as they age, many lose the ability to maintain their seal, leading to leaks.

Rein First Aid coolant, oil, and fuel caps are designed to maintain the correct pressure, making sure the vehicle operates smoothly and that no check engine lights illuminate.

Car models that are prone to have cap problems:

Volkswagen Jetta 2001-05 • Volvo S60 2001-09 • BMW 5' Series 1991-2010

Electrical Components (Relays, Sensors, Switches, Fans)

If one of the switches, sensors, or relays fail, the vehicle's check engine light may appear, indicating a lack of efficiency, power, or other engine malfunction.

These Rein First Aid components are designed to replace those with high failure rates. If a switch or sensor needs washers, O-rings or clips as part of the install, don't worry, they're included.

Car models that are prone to have electrical problems:

Mini Cooper 2002-08 • Volkswagen Beetle 2001-05 • Audi A6 1998-2004

Engine Parts (Dipsticks and Dipstick Funnels)

Some European vehicles have more trouble than most with plastic components such as dipstick handles and dipstick funnels. The plastic gets brittle and can crack or break, introducing a vacuum leak to the engine.

Rein First Aid allows you to stock these parts when they are needed.

Car models that are prone to have engine part problems:

Volkswagen Golf 2001-06 • Audi A4 2001-06 • Volkswagen Jetta 1999-2009

Oil Hose Assemblies (P/S and Trans Oil Cooling Hoses)

There are high demands placed on systems like power steering and transmissions. The hoses we have included with this program include power steering hoses that are known to fail as well as transmission cooling hoses that fit a vast number of vehicles and have similar problems with leaking.

Car models that are prone to have oil hose assembly problems:

BMW 3' Series 2000-05 • Volkswagen Golf 1999-2010 • Mercedes-Benz E' Class 1998-2003
